

BioLife Solutions Granted European Biopreservation Patent Expands Protection of Key Intellectual Property Related to Minimizing Cell Death

PRNewswire-FirstCall
BOTHELL, Wash.

BioLife Solutions, Inc. (BULLETIN BOARD: BLFS) , a leading developer and marketer of proprietary cGMP hypothermic storage and cryopreservation media products for cells, tissues, and organs, today announced that it has been granted a European patent for an application that includes claims related to protecting cells from injury and death caused by cold temperatures used in biopreservation. The patent titled, "Inclusion of Apoptotic Regulators in Solutions for Cell Storage at Low Temperature," was previously granted US patent protection.

Mike Rice, BioLife's chairman and CEO, noted that the new patent expands the protections of the Company's key intellectual property related to regulating the biologic process of apoptosis (programmed cell death) in response to the accumulated stress due to exposure to hypothermic and freezing temperatures. The new patent is a direct result of BioLife's ongoing effort to increase the value of its intellectual property portfolio and enable additional product and licensing revenue streams for BioLife, he added.

"We've repeatedly shown via numerous internal and customer validations that our products better protect cells and tissues from the harmful necrotic and apoptotic effects of hypothermic storage, freezing, and thawing, and as a result, can extend the shelf life and improve the post preservation recovery, viability, and functional yield of both biologic source material as well as isolated cells," Rice said, adding that the Company has submitted several additional patent applications during 2008.

About BioLife Solutions, Inc.:

BioLife Solutions develops and markets patented hypothermic storage/transport and cryopreservation media products for cells, tissues, and organs. The Company's proprietary HypoThermosol® and CryoStor™ platform of biopreservation media products are marketed to academic research institutions, hospitals, and commercial companies involved in cell therapy, tissue engineering, cord blood banking, drug discovery, and toxicology testing. BioLife's cGMP products are serum-free and protein-free, fully defined, and formulated to reduce preservation-induced, delayed-onset cell damage and death. BioLife's enabling technology provides research and clinical organizations significant improvement in post-preservation cell and tissue viability and function.
