

BioLife Solutions Granted Japanese Biopreservation Patent Key Intellectual Property Related to Minimizing Biopreservation-Induced Cell Death

PRNewswire-FirstCall
BOTHELL, Wash.

BioLife Solutions, Inc. (BULLETIN BOARD: BLFS) , a leading developer, manufacturer, and marketer of proprietary cGMP hypothermic storage and cryopreservation media products for cells, tissues, and organs, today announced that it has been granted a Japanese patent for an application that includes claims related to protecting cells from injury and death caused by cold temperatures used in biopreservation. The patent is titled "Inclusion of Apoptotic Regulators in Solutions for Cell Storage at Low Temperature," and BioLife was previously granted US and European patent protection for this intellectual property.

Mike Rice, BioLife's chairman and CEO, noted the new patent is a direct result of BioLife's ongoing efforts to increase the value of its intellectual property portfolio and enable additional product and licensing revenue streams for BioLife. "In addition to this granted Japanese patent, two international Patent Cooperation Treaty (PCT) applications were recently published covering claim sets related to the collection, storage, transport, and banking of whole blood and also birth tissue including cord blood. I'm pleased that our research and development activities continue to produce discoveries and potential innovations in the biopreservation field."

About BioLife Solutions, Inc.:

BioLife Solutions develops and markets patented hypothermic storage/transport and cryopreservation media products for cells, tissues, and organs. The Company's proprietary HypoThermosol® and CryoStor™ platform of biopreservation media products are marketed to academic research institutions, hospitals, and commercial companies involved in cell therapy, tissue engineering, cord blood banking, drug discovery, and toxicology testing. BioLife's cGMP products are serum-free and protein-free, fully defined, and formulated to reduce preservation-induced, delayed-onset cell damage and death. BioLife's enabling technology provides research and clinical organizations significant improvement in post-preservation cell and tissue viability and function.
